📋 HOME BUYER VERDICT

This unit on Floor 23 in Fort / CSMT / Churchgate East offers a strong living experience in a well-regarded area, scoring a solid **72/100** overall. You're looking at a neighbourhood with excellent safety and air quality, paired with a unit that enjoys good natural light, especially in the mornings. It's a comfortable pick, particularly if you value a bright start to your day and a secure environment.

While the area's infrastructure and water supply scores are moderate, the unit's high floor and North-East facing ensure ample morning sun, averaging **4.8 hours** daily, which is a significant plus for comfort. This property is a strong "consider" for buyers prioritizing safety, air quality, and good natural light, especially given its premium location. A higher floor would further enhance views, but this unit already benefits from its elevation.

CONSUMER SCORECARD

SUNLIGHT Good 4.8h/day avg	ENERGY / COOLING High risk High summer heat exposure — expect strong afternoon warmth (6.3h/day avg, North-East-facing).	FAMILY FRIENDLINESS Strong Schools 76, crime 77	ELDERLY SUITABILITY Fair Floor 23, roads 61, crime 77 — medical proximity not yet mapped	INDOOR PLANTS Good 4.8h/day avg light · air quality 82
WORK-FROM-HOME FIT Consistent 2.7–6.8h year-round	INVESTMENT BAND Premium ₹11,148–₹23,226/sqft		VENTILATION Good Good ventilation potential — floor level supports airflow and wind is steady (avg 18.4 km/h today). (Live forecast + floor-based openness estimate, not a year-round average.)	

PROS

+ Air Quality is excellent (82/100)

CONS

– High summer heat-gain risk

+ Good natural ventilation potential

IDEAL FOR

Young professionals/singles: who value a safe, well-connected area with good air quality and morning sun; Families with young kids: who prioritize safety and access to schools, appreciating the bright living spaces.

Neighbourhood Analysis — Fort / CSMT / Churchgate East

Area-level — the same for every unit in this pincode. Source: Neighbourhood Score.

CRIME 183/yr · safer than 97% of areas	SCHOOLS MAPPED 1	PRICE CONTEXT ₹11,148–₹23,226/sqft
---	---------------------	---------------------------------------

This Fort / CSMT / Churchgate East location presents a compelling package, especially when it comes to safety and environmental quality. The area boasts an impressive Air Quality score of **82/100**, indicating a healthier living environment compared to many urban locales. Coupled with an outstanding Crime score of **77/100**, with only 183 recorded cognizable crimes per year, it's demonstrably safer than **97%** of comparable areas, falling into the "Very Low" crime tier. This translates to peace of mind for residents, whether walking home late or letting children play.

On the practical side, Power scores well at **74/100**, suggesting reliable electricity supply, a crucial factor in India. For families, the Schools score of **76/100** and the presence of at least one mapped school nearby are reassuring. However, it's important to note the moderate scores for Water (**58/100**), Roads (**61/100**), and overall Infrastructure (**65/100**). While not critically low, these suggest that while core services are present, there might be occasional inconveniences or areas for improvement in daily commutes or water pressure compared to the top-tier aspects. The price context, ranging from ₹11,148–₹23,226 per sq ft, places this area firmly in the "Premium" band, reflecting its desirable location and strong fundamentals, particularly safety and air quality.

- Families with school-age kids: The high safety score of **77/100** and good schools score of **76/100** make this a very attractive option for a secure and supportive environment for children.
- Young professionals/singles: With excellent air quality at **82/100** and reliable power at **74/100**, this area offers a high quality of life, though the moderate infrastructure score of **65/100** means you should factor in potential traffic.
- Investors/renters: The "Premium" price band, combined with a strong composite score of **72/100** and very low crime, suggests this property is priced in line with the area's strengths, offering good long-term value and rental appeal.

Sun & Shadow Analysis — Floor 23, North-East-facing

BEST MONTHS June, July, May	WORST MONTHS December, January, November	DAILY AVERAGE 4.8h usable sun
--------------------------------	---	----------------------------------

FLOOR 23 SPECIFIC ANALYSIS

Being on Floor 23, approximately **69m** high, gives this unit a significant advantage in terms of direct sunlight, largely clearing typical urban obstructions. The North-East facing aspect means you'll primarily experience morning sun. In the peak summer months like June, you can expect direct sun from as early as **05:42**, providing a bright start to your day.

This early morning sun continues for a substantial **6.8 hours** in June, offering excellent natural light for most of the morning and early afternoon. Similarly, July and May are also strong, with **6.7 hours** and **6.5 hours** of usable sun respectively, starting around **05:49** and **05:44**. This means you'll enjoy abundant natural light for daily activities, potentially reducing the need for artificial lighting during these hours and benefiting from the mood-boosting effects of sunlight.

As we move into the cooler, winter months, the sun's path shifts, and its elevation is lower. In December, the unit still gets sun from around **06:46**, but the usable sun drops to **2.7 hours**. January and November are similar, with **3 hours** and **3.2 hours** respectively, starting around **06:54** and **06:25**. This means that while you still get direct morning sun, it's for a shorter duration. You might find yourself needing artificial lighting earlier in the afternoon during these months. However, the lower sun elevation in winter also means less intense heat gain, which can be a comfort advantage in a climate like Mumbai. The overall average of **4.8 hours** of usable sun per day is quite good, ensuring a well-lit home for a significant portion of the day throughout the year, with the high floor minimizing ground-level shadow interference.

NORTH-EAST-FACING WINDOW ASSESSMENT

A North-East-facing window at this location will primarily receive direct sunlight during the morning hours, from sunrise until the sun moves past the eastern azimuth. This is because the sun rises in the east (or slightly north/south of east depending on the season) and then tracks across the sky towards the south (in winter) or more directly overhead (in summer) before setting in the west. For a North-East facing window, the direct sun will enter as the sun rises and continues its ascent in the eastern sky.

Specifically, you'll see direct sun from the earliest clear sightline in the morning, which ranges from around **05:42** in June to **06:54** in January. This direct sun will typically last until late morning or early afternoon, depending on the season and the sun's azimuth. For instance, in the summer months when the sun's path is more northerly and higher, the North-East facing windows will receive direct sun for a longer duration into the morning. As the sun moves towards its peak elevation and then to the west, the direct light will shift away from the North-East facade. This facing is generally considered very good for a hot climate like Mumbai, as it provides ample natural light and warmth in the mornings, which can be pleasant, but avoids the harsh, intense afternoon sun that can lead to significant heat gain. This helps keep the unit cooler in the afternoons and evenings, reducing reliance on air conditioning.

PITCH SHEET

- Opening line: This Floor 23 unit in Fort / CSMT / Churchgate East offers a compelling blend of prime location, exceptional safety, and abundant morning sunlight.
- Strongest verifiable claim: The neighbourhood is demonstrably safer than **97%** of comparable areas, with a "Very Low" crime tier.
- Buyer type this suits: Families with young kids will appreciate the **76/100** schools score and the very low crime rate for a secure upbringing.
- Buyer type to not waste a visit on: Someone prioritizing cutting-edge infrastructure and perfectly smooth roads might find the **65/100** infrastructure and **61/100** roads scores a slight compromise.
- Likely objection and the honest answer: "What about water supply?" The water score is **58/100**, which is moderate, but the power score is **74/100**, indicating reliable electricity to potentially run pumps if needed.
- What not to promise: Do not promise all-day sun; the North-East facing unit primarily receives direct sun in the mornings, averaging **4.8 hours** daily.

Usable Sun Hours by Month

HOW THIS REPORT WAS BUILT

- Neighbourhood factor scores, crime, schools, and price context come from Neighbourhood Score — the same for every unit in this pincode, deterministic, not AI-generated.
- The Combined Score is $(72 \times 50\%) + (72 \times 50\%) = 72$ — a weighted average, not AI-generated.
- Sun position and monthly sunlight hours come from a NOAA solar-geometry algorithm — deterministic, not AI-generated.
- Floor clearance uses a generic urban-obstruction estimate, not a measurement of this property's specific neighboring buildings.
- The narrative sections use AI to interpret the real numbers above and describe the screenshots — it is instructed to treat the figures as fact, not to estimate its own.
- The 12 sun/shadow map screenshots and their per-image analysis are in a separate gallery, linked near the top of this report (and clickable in the downloaded PDF too) — that link works as long as the browser tab this report was generated in stays open; it won't work if reopened later in a new session, since the gallery isn't hosted on a server yet.
