 HOME BUYER VERDICT

This property in Sector 6 is in a good area with strong schools and low crime, which is great for attracting tenants. However, this particular flat on the second floor, facing East, doesn't get as much morning sun as you'd hope, making it less bright inside, especially in winter. Overall, it's an okay pick, but you'll need to factor in the light issue when considering its rental appeal and potential resale value.

The combined BlindSpot Score of **59/100** indicates that while the neighbourhood scores a strong **76/100**, the unit's Home Comfort Score is a lower **44/100**. This suggests the area commands a premium, but this specific unit's light conditions could cap its rental and resale potential. It's worth considering if the purchase price is at the lower end of the ₹5,800–₹10,220 per sq ft government guidance value, allowing for the unit's specific drawbacks. A higher floor or a unit with a clearer East exposure would likely offer better returns.

CONSUMER SCORECARD

SUNLIGHT Good 4.3h/day avg	ENERGY / COOLING Fair High summer heat exposure — expect strong afternoon warmth (5.1h/day avg, East-facing).	FAMILY FRIENDLINESS Strong Schools 83, crime 81	ELDERLY SUITABILITY Good Floor 2, roads 87, crime 81 — medical proximity not yet mapped	INDOOR PLANTS Good 4.3h/day avg light · air quality 78
WORK-FROM-HOME FIT Consistent 3.0–5.3h year-round	INVESTMENT BAND Upper ₹5,800–₹10,220/sqft	VENTILATION Limited Limited ventilation potential — lower floor and/or light wind (avg 5.8 km/h today). (Live forecast + floor-based openness estimate, not a year-round average.)		

PROS

+ Crime is excellent (81/100)

CONS

- Limited ventilation potential

- + Schools is excellent (83/100)
- + Water is excellent (91/100)
- + Roads is excellent (87/100)
- + Sewerage is excellent (84/100)

IDEAL FOR

Investors seeking stable rental income in a well-regarded area, provided the purchase price reflects the unit’s specific light limitations.

Neighbourhood Analysis — Sector 6

Area-level — the same for every unit in this pincode. Source: Neighbourhood Score.

CRIME 187/yr · safer than 65% of areas	SCHOOLS MAPPED 10	PRICE CONTEXT ₹5,800–₹10,220/sqft
---	----------------------	--------------------------------------

Sector 6 presents a robust foundation for an investment property, reflected in its strong Composite Neighbourhood Score of **76/100 (Grade B+)**. The area’s primary strengths lie in its excellent social infrastructure and safety, which are crucial for attracting and retaining tenants. With a Schools score of **83/100** and 10 mapped nearby, it's highly attractive to families, a key demographic for stable rental income. The low crime tier, with only 187 recorded cognizable crimes per year and being safer than 65% of comparable areas (Crime score **81/100**), further enhances its appeal to all tenants prioritizing security. Essential services like Water (**91/100**), Roads (**87/100**), and Sewerage (**84/100**) are also exceptionally well-rated, ensuring a high quality of life for residents and minimizing tenant complaints related to basic amenities.

However, a notable weakness for this sector is its Infrastructure score of **57/100**. While not critically low, this suggests potential limitations in connectivity or broader civic development that could impact commute times or access to certain amenities, particularly for tenants who rely heavily on public transport or quick access to business hubs. The Power score of **70/100** is decent but not outstanding, indicating a reasonable level of reliability. The Air Quality at **78/100** is good, contributing positively to tenant well-being. The price context, an "Upper" band of ₹5,800–₹10,220 per sq ft (government guidance value, not a market quote), suggests the market already recognizes the area's strong fundamentals, particularly its social infrastructure and safety. This implies that while the area is desirable, the pricing may already reflect these strengths, potentially limiting significant capital appreciation unless there are major infrastructure upgrades. BlindSpot does not model rents or yields, but these factors directly influence them.

- Families: The exceptional Schools score of **83/100** and "Low" crime tier (81/100) make this area highly desirable for families, ensuring a strong tenant pool.
- Young professionals/singles: While the Infrastructure score of **57/100** is a moderate concern, the good Air Quality (78/100) and decent Power (70/100) still offer a reasonable living environment for those prioritizing safety and basic amenities.
- Investors: The price band of ₹5,800–₹10,220 per sq ft against a Composite Neighbourhood Score of **76/100** suggests the area is priced in line with its strong fundamentals, particularly its social infrastructure and safety.

 BEST MONTHS
June, May, July

 WORST MONTHS
December, January, November

 DAILY AVERAGE
4.3h usable sun

FLOOR 2 SPECIFIC ANALYSIS

This Floor 2 unit, situated at approximately 6m height, experiences a significant delay in receiving direct morning sunlight due to an estimated 21° obstruction, likely from a neighboring building to the east or southeast as seen in the map images. In the peak summer months (May-July), direct sun will first reach the East-facing unit around **07:10-07:20**, providing a good start to the day with 5.2-5.3 hours of usable sun. This early morning sun is generally desirable for tenants, offering natural light without the intense heat of afternoon sun, which can help reduce cooling costs and improve tenant satisfaction.

However, the impact of this obstruction becomes much more pronounced in the winter months (November-January).

During this period, direct sunlight is delayed until much later, specifically around **09:20-09:26**. This means tenants will experience significantly dimmer mornings, requiring artificial lighting for a longer duration. The usable sun hours also drop considerably to just **3-3.3 hours** per day in these months. This lack of early morning sun in winter could be a disadvantage for tenant comfort and energy bills, as it reduces passive heating and increases the need for artificial light, potentially impacting the unit's rental appeal and value. The overall average of **4.3 hours/day** usable sun is decent, but the seasonal variation and delayed morning sun are critical factors for tenant satisfaction and thus, rentability.

EAST-FACING WINDOW ASSESSMENT

An East-facing window at this location will primarily receive direct sunlight in the mornings, from sunrise until the sun moves past the eastern azimuth. However, for this specific Floor 2 unit, the estimated 21° obstruction significantly delays the arrival of this morning sun. In summer, when the sun rises early and has a higher trajectory (noon elevation up to 81°), direct sun will enter the unit from approximately **07:10-07:20**. As the sun's elevation increases rapidly, it will quickly move overhead, providing direct light for a few hours before shifting towards the south and west. This morning sun is generally considered beneficial, offering natural light to start the day without the harsh heat of direct afternoon sun, which can be a strong selling point for tenants and potentially reduce cooling costs.

Conversely, in winter, the sun rises later and has a much lower trajectory (noon elevation as low as 36°). This means the 21° obstruction will block direct sunlight for an even longer period, with sun only reaching the East-facing windows from around **09:20-09:26**. The lower sun elevation means that even when the sun clears the obstruction, it will remain at a relatively low angle, providing less intense and shorter-duration direct light. This extended period of morning shadow in winter is a significant drawback for an East-facing unit, as it negates much of the benefit of early morning light and warmth. For an investor, this translates to a unit that might be perceived as less bright and potentially colder in winter mornings, which could impact its appeal to tenants and its overall rental value. While East-facing is generally preferred for avoiding afternoon heat, the substantial morning obstruction here diminishes its advantage.

RENTAL AND RESALE POSITION

- Price band against fundamentals: The "Upper" price band of ₹5,800–₹10,220 per sq ft (government guidance value) for Sector 6 appears priced in line with the area's strong Composite Neighbourhood Score of **76/100**.
- Tenant profile this suits: This property is best suited for families due to the exceptional Schools score of **83/100** and "Low" crime tier (81/100), and for young professionals who prioritize safety and good air

quality, rated at **78/100**.

- Strongest pricing lever: The area's robust social infrastructure, particularly its Schools score of **83/100** and "Low" crime tier (81/100), will drive tenant demand and support rental values.
- Biggest discount risk: The unit's Home Comfort Score of **44/100**, primarily due to delayed morning sun in winter (as late as 09:26), poses the biggest risk for price negotiation and tenant appeal.
- Obstruction risk to future light: The ground truth does not provide specific data on future obstruction risk from neighboring plots for this address.
- Infrastructure trajectory: The ground truth does not provide data on future infrastructure plans or trajectory for this

address.

HOW THIS REPORT WAS BUILT

- Neighbourhood factor scores, crime, schools, and price context come from Neighbourhood Score — the same for every unit in this pincode, deterministic, not AI-generated.
- The Combined Score is $(76 \times 50\%) + (44 \times 50\%) = 59$ — a weighted average, not AI-generated.
- Sun position and monthly sunlight hours come from a NOAA solar-geometry algorithm — deterministic, not AI-generated.
- Floor clearance uses a generic urban-obstruction estimate, not a measurement of this property's specific neighboring buildings.
- The narrative sections use AI to interpret the real numbers above and describe the screenshots — it is instructed to treat the figures as fact, not to estimate its own.
- The 12 sun/shadow map screenshots and their per-image analysis are in a separate gallery, linked near the top of this report (and clickable in the downloaded PDF too) — that link works as long as the browser tab this report was generated in stays open; it won't work if reopened later in a new session, since the gallery isn't hosted on a server yet.
